Henk Birkholz
<henk.birkholz@ietf.contact>

Current Status

- What's MUD?
  - MUD URL & MUD file
  - Decoupling pointer authority from file authority
- Where is the MUD document?
  - https://datatracker.ietf.org/doc/draft-birkholz-rats-mud/
- In adoption in the IOT Operations WG
  - Just rechartered to allow for all MUD related work
    (where the MUD experts are)
  - This not where the RATS experts are! (but RATS seems to be "full")

Purpose and Next Steps

- Including MUD URLs in RATS Conceptional Messages and auxiliary documents
- What RATS role needs to discover what?
  - Endorsement Discover?
  - Service Discovery, in general?
- Questions to the room:
  - What documents and services are in of interest?
  - Which vehicles are of interest to vendors?
    - EAT, DevID, carrier pidgons?
  - What's a better term the TD... (if you do not know, maybe you do not want to) (Russ did no like it a lot)
